Allowable Subject Matter

1. Claims 1-33,50,53-56 and 59-71 are allowed.
2. The closest prior art, Dehm et al., discloses curable polyurethane coating compositions comprising a polyisocyanate and a mixture of isocyanate-reactive compounds including a polyether polyol. The use of diamine chain extending agents and phenolic resins are both suggested. However, the reference requires the presence of polyols to react with the isocyanate and does not teach the inclusion of at least 70% amine groups based on the number of active hydrogen groups. Also, the reference does not teach the specific blending of primary and secondary amine-terminated polyols for reaction with the isocyanate or the use of high molecular weight aminated polyols. It is the examiner's position that the applicant's claimed amine group amount and amine-terminated polyol blend in the claimed methods and compositions would provide novel and unobvious steps over the prior art.
